

BaoJi has over 20 years' experience in the field of flow control products manufacturing. In 1985, the first valve parts machining factory was set up in Taiwan. In 1994, another new factory was built in China mainland, and the products also focus on the valve field which we specialize in. We offer the high qualified valve accessories to the worldwide valve manufactures.

As the company constantly expanding in scale, and the increase demands of the market, in order to reduce the purchase cost, the casting and forging workshop matched with the machining workshop were set up one after another.

The products category is extended to other products other than valve parts.

The technologies involve the casting, forging, machining. The material includes stainless steel, carbon steel, copper, aluminum, and etc.
